Introduction

Interest in **penetration testing**, web app security and reverse engineering. **Curious**, adaptable and disciplined, with a demonstrated ability to **multitask** and resolve issues rapidly. Fresh graduate of Information Security Masters studies, while also being a key team member at the job and sharpening my threat hunting and coding skills everyday through individual learning and competitions.

Skills

- **Technical Tools:** Metasploit | Burp Suite | IDA | John | Hydra | Wireshark + more
- **Operating Systems:** Kali Linux | Windows OS | Linux OS
- **Scripting & Coding:** Python | JavaScript | HTML | CSS
- **Languages:** Romanian (**Native**) | English (**C1**) | French (**B2**)

Education

Master's, Information Security (EN)	Alexandru Ioan Cuza University	09/2023 -07/2025
Bachelor's, Business Administration (EN)	Alexandru Ioan Cuza University	09/2020 -07/2023

Certifications

- INE Junior Penetration Tester (**eJPT**)
- INE Certified Cloud Associate (**ICCA**)
- Cambridge English **C1**
- Learning for CompTIA **Security+**

Experience

Senior Product Compliance Associate, Amazon

11/2024 - **Current**

- Conducted product safety investigations, analyzing safety and compliance incidents
- Managed product recalls and suppressions according to legal and regulatory standards, communicating with sellers, and notifying affected customers.
- Developed Tampermonkey **scripts** to automate different processes, improving efficiency for the team
- Provided training and mentorship
- Led team meetings, reporting progress on projects and contributing to strategic planning

Projects

- Asteroids ([GitHub](#)) - November 2025
Python game with an emphasis on OOP (mostly Classes, Objects and Inheritance). Guided project from Boot.dev
- Bookbot ([GitHub](#)) - September 2025
Python project that reads a file and prints out the character counts, sorted from most frequent to least frequent.
- Email Spam Filter ([GitHub](#)) - February 2025

A machine learning-based email classifier using Naïve Bayes and TF-IDF. Trained on real-world data to distinguish spam from clean emails with high accuracy.

- **Personal Website** - 2025 Ongoing

Portfolio website, allowing people to know more about myself and my work.

- Password Manager (**GitHub**) - September 2024

Simple password manager built with Python. Allows users to store, manage, and retrieve passwords. Includes features like password generation, clipboard copying, and a recovery mechanism.

- DNS Spoofing (**GitHub**) - June 2024

Executed DNS spoofing attacks using Kali Linux tools, successfully redirecting traffic from a real website to a custom Apache server. Explored how attackers use DNS hijacking as an entry point for malware delivery and command and control channels

CTFs

- Bitdefender Cybersecurity Grand Prix 2025 - reverse engineering, web applications, forensics, coding
- TryHackMe: **Glitch21** (top 5%) - reverse engineering, forensics, network exploitation, and privilege escalation challenges.
- INE CTF Arena Round 8 - network security, common vulnerabilities exploitation, pentesting and privilege escalation challenges

Volunteerism

- Green Museum - Exploring Sustainability

Collaborated with a 5 member team in order to organize an event at the University Museum in Iasi, where 4 international speakers presented their projects related to sustainability at the workplace.
